

ContractGate

DESIGN PARTNER OFFER

2-week pilot

Put ContractGate on one real feed. Measure bad events blocked. Decide with data — not a slide deck.

WHAT YOU GET

- Guided setup on one HTTP or Kafka path
- First semantic contract (from sample or scaffold)
- Live validation + quarantine workflow
- End-of-pilot report: pass/fail rates & examples
- Office hours with the team (async + 2 calls)

WHAT WE NEED

- One owner (data/platform eng)
- One producer feed or topic
- Sample good + bad events (or we capture live)
- ~3–5 hours of your time over 2 weeks
- Permission to share anonymized metrics (optional logo)

Week 1 — Gate up

Connect path · draft contract · validate against history or live sample · first quarantine visible in UI.

Week 2 — Prove value

Tune rules · replay a fix · capture success metrics · decide: Growth, Enterprise, or self-host free forever.

Success metric (pick one at kickoff)

A) First contract enforcing on a production path · B) N bad events blocked that would have polluted the warehouse · C) Time-to-first-contract under 1 day

Design partner

\$0 pilot

Feedback + optional logo rights

After pilot

Growth \$299/mo

or Self-Hosted Free forever
